Afsaneh Rezaeinejad

SENIOR QA ENGINEER

Kuala Lumpur | afsaneh.rezaee5@gmail.com | linkedin.com/in/afsaneh-rezaeinejad-48ba454a | github.com/Afsanehrezaeinejad

PROFILE

Senior QA Engineer with 8+ years of experience designing automation, realistic API simulations, performance strategies, and delivery-time quality feedback. Progressed from hands-on product testing to reusable quality infrastructure that helps engineering teams expose risk earlier and release with greater confidence.

SELECTED IMPACT

Up to 70% less migration effort	Built a Python migration tool using Model Context Protocol (MCP) to convert Katalon UI automation tests to Appium.
Feedback before merge	Built Dockerized mock services and a scalable Karate integration framework so backend engineers can run integration and smoke tests when pull requests are created.
80% authentication automation coverage	Built coverage in parallel with implementation; the release shipped on time with no major issues.
50% shorter Wallets regression cycle	Directed a Cypress end-to-end suite that also surfaced major defects earlier.

EXPERIENCE

MoneyLion | Senior QA Engineer

Oct 2025 - Present

- Built an AI test-design framework using retrieval-augmented generation (RAG) and Figma MCP to turn requirements, Jira tickets, and designs into structured test cases.
- Created reusable Karate mocks for the Membership API, including simulated Kafka event flows and scenario-specific responses, so teams could develop subscription functionality in parallel.
- Built an automation-health dashboard in Snowflake and Periscope that increased overall automation stability from 70% to 80%.
- Performance-tested a cron-based payment collection API to identify capacity limits and quality bottlenecks.

Deriv | Senior QA Automation Engineer

Feb 2023 - Sep 2025 | Malaysia

- Reached 80% authentication-flow automation coverage before implementation finished; the release shipped on time with no major issues.
- Automated test-data generation with Perl, reducing manual testing time by 60%.
- Built JMeter performance tests for critical WebSocket APIs and GitHub Actions pipelines for commit-level smoke, on-demand regression, and scheduled sanity testing.
- Mentored junior engineers and established automation standards for the team.

Deriv | QA Automation Engineer

Apr 2022 - Jan 2023 | Malaysia

- Migrated Robot Framework suites to Cypress and introduced maintainable test-code practices, reducing regression time by 30%.
- Automated crypto-test environment setup with Perl, reducing manual effort by 30%.
- Diagnosed AWS QA-environment readiness delays and partnered with DevOps to shorten setup time for subsequent cycles.

Dana Pardaz | QA Engineer

Apr 2019 - Mar 2022

- Automated web functional tests with Selenium, improving regression efficiency and coverage.
- Tested ITIL API endpoints with Postman, catching critical issues early and reducing post-release defects by 20%.

Hamavaran | QA Engineer

May 2018 - Mar 2019

- Investigatively tested value-added service (VAS) applications, isolated product risks, and communicated critical findings to improve reliability.

TECHNICAL CAPABILITIES

Automation	Cypress, Playwright, Selenium, Robot Framework, Appium
APIs and simulation	Karate, Postman, Kafka event flows, API and WebSocket testing
Performance and visibility	JMeter, k6, Snowflake, Periscope
Delivery	GitHub Actions, Azure DevOps, Docker
Languages	JavaScript, Python, Perl
AI-assisted quality	Retrieval-augmented generation (RAG), Figma MCP, MCP-based migration tooling

EDUCATION

Master's Degree in IT Communication Networks | Islamic Azad University | 2018 - 2020

Bachelor's Degree in IT | Institute for Advanced Studies in Basic Sciences (IASBS) | 2014 - 2018
